Overview

As an Enterprise Architect at BARDD, you will play a key role supporting and guiding organisations to success in transformation, cultural change and complex delivery. You will play a pivotal role in defining and implementing the enterprise-wide technology and business strategies, ensuring alignment with the client's goals and objectives.

Key Functions

- Collaborate with senior management and key stakeholders to define the company's long-term technology and business strategies. Develop a comprehensive roadmap that aligns technology initiatives with the organisation's vision, mission, and goals
- Create and maintain the enterprise architecture blueprint that encompasses business processes, information systems, data flows, application landscapes, and technology infrastructure. Ensure that the architecture is scalable, flexible, and capable of supporting the evolving business needs
- Research, evaluate, and recommend emerging technologies, tools, and platforms to enhance the organisation's efficiency and performance. Conduct feasibility studies and cost-benefit analysis for potential technology investments
- Establish and enforce enterprise-wide technology standards, guidelines, and best practices to ensure consistency and interoperability across all systems and applications. Monitor compliance with these standards and recommend improvements as needed
- Act as a bridge between technical teams and business stakeholders, facilitating effective communication and understanding between them. Collaborate with various departments to align IT initiatives with business objectives
- Identify potential risks and challenges related to technology implementations and propose mitigation strategies. Ensure that security, privacy, and compliance standards are adhered to in all technology solutions
- Lead change management efforts related to technology transformations, ensuring smooth transitions and minimal disruption to business operations. Guide teams through technology adoption and implementation processes
- Monitor the performance of existing systems and applications, identifying areas for improvement and optimization. Make recommendations for enhancements to increase efficiency and reduce operational costs

Competencies

- Experience in enterprise architecture within large-scale organisations
- Proven expertise in designing and implementing enterprise-wide technology solutions
- Strong knowledge of enterprise architecture frameworks (E.g. TOGAF, Zachman, or FEAF)
- Demonstrated experience in aligning technology strategies with business goals
- Excellent communication and interpersonal skills to collaborate effectively with technical and non-technical stakeholders
- Analytical mindset with the ability to think strategically and solve complex business and technical challenges
- Knowledge of industry best practices, emerging technologies, and trends in enterprise architecture
